DISASSEMBLY FOR REPAIR

(Remove the metallic cabinet before performing the following operations.)

1. Remove the 3 screws fixing the front panel to the chassis (1).
2. Disengage the 2 claws of the sub panel from the chassis (2).
3. Remove the front panel together with the sub panel in the direction of the arrow (3).
4. Pull out the 2 knobs of the VOLUME and BALANCE from the shafts, and remove the hex. nut from the VOLUME shaft (4).
5. When installing the front panel, pay attention to the mounting position related to the chassis (5).

6. Remove the 3 screws fixing the Receiver Unit (X14-2180-10) (B/8) to the sub panel (6).
7. Remove the Receiver Unit (X14-) (B/8) in the direction of the arrow (7).
8. Remove the screw fixing the Receiver Unit (X14-) (H/8) to the sub panel (8).
9. Remove the Receiver Unit (X14-) (H/8) in the direction of the arrow (9).
10. Remove the 5 screws fixing the Receiver Unit (X14-) (G/8) to the sub panel (10).
11. Disengage the 4 claws (upper side: 2, lower side: 2) of the sub panel which retain the Receiver Unit (X14-) (G/8) (11).
12. Remove the Receiver Unit (X14-) (G/8) in the direction of the arrow (12).
13. Remove the 2 screws fixing the multiple push switch (S4) to the sub panel (13).
14. Remove the multiple push switch (S4) together with the Receiver Unit (X14-) (C/8) in the direction of the arrow (14).

Terminal description

Terminal No.	Symbol	Terminal Description
1	V _{BB}	PCB terminal (Connect a 0.01 μ F capacitor between the GND).
2	CLK	Input terminal for the clock used for 20-bit serial data input (Shifted at the rise).
3	LAT	Input terminal for the shift register input data latch signal (shifted at the rise) and, at the same time, for the Up/Down clock (status changed at the rise).
4	DIN	Data input terminal, also the Up/Down mode switching terminal (Up mode with "H" level, Down mode with "L" level).
5	XI	Connection terminals for the reference signal generator X'tal oscillator. (Max. 13 MHz, standard 4.0 MHz)
6	XO	
7	PD	Phase comparator output terminal (3-state).
8	AO	External control signal output terminal/Unlock signal output terminal (E/E MOS push-pull).
9	BO	External control signal output terminal/data check terminal (E/E MOS push-pull).
10	TVI	High-frequency signal input terminal (300 MHz or 350 MHz max.). With 1/2 prescaler.
11	FMI	High-frequency signal input terminal (150 MHz or 180 MHz max.).
12	V _{DD}	Power supply (+5V).
13	AMI	High-frequency signal input terminal (40 MHz or 50 MHz max.).
14	V _{SS}	Grounding terminal.

2. Stop frequency select switch for auto tuning in LW reception

This switch is used to set the frequency which intakes the SD signal in LW band reception. For both manual and auto tuning, the tuning frequency is changed up or down in 1 kHz step, however, in auto tuning mode, the receiving frequency stops at the following frequency selected by this switch.

● Setting of this switch can be changed without resetting (unplugging/plugging the AC cord.)

9N+2 /9N	Frequency range	Channel spacing	Reference frequency	Middle frequency	Stop frequency
1	153 ~ 281 kHz	1 kHz	1 kHz	450 kHz	155, 164 272, 281 kHz

Tuner function

1. Manual tuning

Each time the UP/DOWN key is pressed, the tuning frequency is varied one step higher or lower. When this key is kept pressed for more than 0.5 seconds, the frequency is changed up or down at approx. 128 msec/step (approx. 224 msec/step for TV reception) until the key is released.

2. Auto tuning

When the AUTO/MONO switch is set to AUTO, pressing the UP/DOWN key starts auto tuning. The tuning frequency is changed up or down at approx. 128 msec/step (approx. 224 msec/step for TV reception) until the high-level signal is input to the SD pin. When the high-level signal is input, auto tuning operation stops.

3. Preset memory

Up to 16 or 20 frequencies (the maximum number of preset stations is set by the diode switch) can be preset randomly for FM, MW (AM) and LW (TV) stations.

a) How to preset

When the MEMORY key is pressed, the "MEMORY" indicator lights and the unit is set to the write-enable status. Writing to memory is possible for approx. 5 seconds after the MEMORY key is pressed. During this time, pressing any of the numeric key (1 – 10) will write the currently-received frequency into memory corresponding to the key pressed.

b) How to recall

When the tuner functions, pressing any of the preset keys will recall the stored contents corresponding to the key pressed.

4. Preset scan

When the PRESET SCAN key is pressed, the SD pin goes high level. A preset channel is received for 5

● Test mode set-up:

Set the test pin (P15) to high level, and invert it to low level after turning the power ON. (The entire FL display will light except for MEMORY.)

seconds, then the receiving frequency is changed to the next preset channel. When the SD pin is low level, the receiving channel is changed to the next preset channel after one second.

a) Key processing during scanning

- Preset key: Stops the scanning operation and receives the frequency of the designated preset channel.
- UP/DOWN key: Stops the scanning operation and processes the UP/DOWN function.

Function of tact switches

Name	Function																
POWER	Power ON/OFF key. Each time this key is pressed, the Power pin is inverted. When the POWER switch is turned ON, the Power pin goes high level and the last channel (which is received when the power switch is turned off) is recalled. When the POWER switch is turned OFF, the Power pin goes low level and no indication will be displayed.																
FM AM (MW) LW (TV)	Band select key for FM, AM (MW) and LW (TV). The reference data and the program data corresponding to the selected band will be transmitted to the PLL IC. However, if the band which is the same as that currently selected is selected, the command is not accepted.																
UP DOWN	<p>Frequency up/down key.</p> <ul style="list-style-type: none"> ● Auto tuning When this key is pressed, the frequency is changing to the higher or lower scale at approx. 128 msec/step in the square mode. When the high-level signal is input to the SD pin, auto tuning operation is stopped and that frequency is received. ● Manual tuning Each time this key is pressed, the frequency is changed up/down by one step (channel spacing). When it is kept pressed for more than 0.5 seconds, the frequency is changed at approx. 128 msec/step until the key is released. 																
Numeric keys (1 – 8) (numeric keys (1 – 10) for 20-memory model) MEMORY	<ul style="list-style-type: none"> ● Write key (during Memory indicator is lit) During approx. 5 seconds after the MEMORY key is pressed, pressing any of the numeric keys 1 – 8 (or 1 – 10) will write the frequency and the band which are currently received into the memory corresponding to the key pressed. ● Recall (when Memory indicator is not lit) When any of the numeric keys 1 – 8 (or 1 – 10) is pressed, the memorized contents (band and frequency) corresponding to the key pressed will be recalled. When the VDD signal is initially input, the lowest frequency in the preset memories will be recalled for each band. 																
AUTO	<p>Auto/Mono select key for FM broadcast. Each time this key is pressed, the FM reception mode alternates between Auto and Mono. The Auto indicator lights and the Auto/Mono pin is inverted.</p> <ul style="list-style-type: none"> ● When auto tuning is available, this key is also used for the auto/manual tuning mode select key. ● When this key is pressed during auto tuning, auto tuning operation stops and the manual tuning mode resumes. 																
Preset Scan	When this key is pressed, the preset channel (1 – 8 or 1 – 10) is scanned sequentially. When the receiving frequency is stored in memory, its contents (frequency and band) is recalled and received for approx. 5 seconds, then the next channel is received. When the receiving frequency is not stored in memory, the next channel is received after 1 second.																
MAIN SUB	<p>Sub Audio Program (bilingual audio channel) mode select key for TV broadcast (MAIN/SUB/BOTH). Each time the key is pressed, the SAP mode is changed in the order MAIN → SUB → BOTH, then MAIN resumes.</p> <p>The indication and the pin status for each mode are as follows:</p> <table border="1"> <thead> <tr> <th>Mode</th> <th>Indication</th> <th>Port (Main)</th> <th>Port (Sub)</th> </tr> </thead> <tbody> <tr> <td>MAIN</td> <td>MAIN</td> <td>H</td> <td>L</td> </tr> <tr> <td>SUB</td> <td>SUB</td> <td>L</td> <td>L</td> </tr> <tr> <td>BOTH</td> <td>MAIN SUB</td> <td>L</td> <td>H</td> </tr> </tbody> </table> <p>This key is effective only when the band is set to the TV position. Name	Function
A/B	Each time the key is pressed, the preset group is alternated between A preset (1 – 8 or 1 – 10) and B preset (1 – 8 or 1 – 10) for recalling or storing. When pressed in the memory write mode, the writing time is set to 5 seconds after pressing the key.
TUNER CD PHONO VIDEO	Used only when the unit is set to the receiver mode. By pressing any of these select keys, the data is transmitted to the Selector IC and the input source is changed. <ul style="list-style-type: none">● Keys related with the Tuner (except for the Preset and Band keys) are not accepted other than when the input selector is set to TUNER.● When any input source other than TUNER is selected, pressing the Band key or Preset key will change the selector to TUNER.● When the input selector which is the same as the current source is selected, muting does not function.
TAPE	Tape monitor key. <ul style="list-style-type: none">● When pressed, the input source indicator LED (TUNER, CD, PHONO or VIDEO) is not changed but the Selector IC is changed.● When the Preset Scan or Frequency Scan is engaged with the selector TUNER selected, pressing this key does not stop the scanning operation.

Clear function of microprocessor IC6

To reset the microprocessor IC4, reconnect the power cord while pressing the MEMORY button.

Operation of microprocessor IC6 at power ON

When voltage VDD at pin ② (power supply) of IC4 rises at power ON and the reset signal at pin ① differentiated by CE signal (Chip Enable signal) at pin ⑧ rises to half of VDD, the clock starts. When the reset signal lowers to half of the VDD, the microprocessor starts operating and the unit is set to normal operation mode.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DC voltages are as measured with a high impedance voltmeter during reception of the FM broadcast signal (with a signal strength of 60 dB at the ANT terminal). Values may vary slightly due to variations between individual instruments or/and units.

Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance pendant la réception d'un signal de programme FM (avec une force de signal de 60 dB à la borne ANT). Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels.

Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Spannungsmesser bei Empfang eines UKW-Signals (mit einer Feldstärke von 60 dB am Antennenanschluß) gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u. U. geringfügig.

Note

Kenwood follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Note

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on the U.S.A (K) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.
